CARAVAN ACCESSORIES C A K TANKS LTD – TANK ORDER FORM. Please read before drawing.

If you are ordering a tank with a 'standard kit' (your price list will confirm this or not) we will not require a drawing. If you are requesting a tank for which there isn't a standard kit then we will require a drawing showing where you require your fittings to be welded into the tank.

Welded fittings that are available are all straight and in the following sizes:

40mm, 1 ½", **1**", **3**4", **15mm,** ½", **12mm and 10mm**. These are the <u>external</u> measurements of the fittings. For example if your hose is ½" <u>internal</u> diameter you need to order the ½" fittings. There is no charge to weld these fittings in the tank at the time of manufacture. We can also fit inspection hatches, slide valves & level gauges at the same time (no charge for fitting).

nung).
Please mark the measurements of the tank on the drawing to enable us to recognise which is top and bottom as most of our tanks can be fitted in any position.
Please complete the following questions:
Your nameTank name & Code
Is your tank/s to be used for Fresh, waste or toilet (please delete purpose not used)
If you are ordering more than one tank on this order with different requirements please use a separate sheet of paper and staple to this order.
Is your tank going to be installed – under the vehicle with fixing brackets or internally in a bed box or similar (please delete installation not used)
Have you requested the red cap which was an optional extra to some tanks (see catalogue and price list if in doubt) YES / NO (please delete)

To help you with your drawing:

Fresh tanks – have you requested a filling inlet (40mm), vent / overflow (12mm or 15mm if tank is to be fitted internally or overspill vents to top of tank if underslung), outlet to pump if required (depends on pump but usually 15mm for $\frac{1}{2}$ " PVC hose or 12mm for speedfit push fit plumbing) and 1" drain off point. Did you require a slide valve, hatch or level indicator? Mark on drawing where they are to be sited and ensure they are listed on order form overleaf.

Waste tanks – have you requested an inlet (usually ¾"), spill over vents on the top and a 1" drain outlet. Do you require a slide valve, hatch or level indicator? Mark on drawing where they are to be sited and ensure they are listed on order form overleaf.

Toilet tanks can have various inlets depending on the toilet installed. Speak to our technical department if in doubt.

C A K Tanks can not be held responsible for errors made if the requests on the drawing are not clear. Changes to the tank that have to be made as a result of this or as a result of your error will be charged for – sorry!
