HIGH SPECIFICATION GAS & CO WARNING ALARMS

Gas warning systems protect lives and health by monitoring the atmosphere inside any enclosed space and triggering optical & acoustic alarms, as soon as the concentration of the gas that is being monitored exceeds the preset threshold level. Our gas warning systems are based on semiconductor sensors that have proved themselves over many years of reliable operation. **KombiAlarm** is the ultimate in gas safety warning alarms.

KOMBIALARM COMBINED GAS AND KO-GAS WARNING SYSTEM

The KOMBIALARM is a self-sufficient warning system with a built-in sensor and an audible and visual alarm-signalling unit. It is equipped with a specially designed sensor that enables the system to work as a gas and KO-gas alarm system at the same time. When gas is detected a loud buzzer sounds to deter intruders and wake the occupants.

Depending on the needs and size of the vehicle or vessel, the system is also available to connect two

The additional sensors are available in two versions, one for the detection of gas (Propane, Butane & Methane) and Anaesthetic (KO) gases or Ether, sometimes called narcotic or "sleeping" gasses. The other sensor is for the detection of carbon monoxide or smoke. The additional sensors can be connected to either sensor output 2 or 3.

One additional switching relay allows the connection of remote alarm units (e.g. strobe flashlight).

The KOMBIALARM detects even the smallest concentrations of KO-gas before it is able to display its intoxicating effect on the passengers and disables their ability to react. The threshold for butane, propane and methane lies well below the igniting point (when the concentration turns volatile) of the gas. Another special feature is the systems relatively low power consumption. After a short warm-up period the alarm is ready for use as the sensor threshold settings are fully automated. LED's indicate power ON, alarm and fault conditions. Operates on 12 Volt DC supply.

Area of use: Boats, Caravans, Motorhomes, Holiday homes, Truck cabs

KOMBIALARM COMPACT MOTORHOME

The KombiAlarm Compact, our most popular unit, is designed for Caravans and Motorhomes and Truck cabs, where the installation of a one sensor unit is sufficient to detect gas and KO-gas. The unit is an easy to fit self-contained unit housed in a neat robust casing. Size H 90mm x W 115mm x D

KMBCMP KOMBIALARM COMPACT

KOMBIALARM MULTI SENSOR MARINE

The KombiAlarm is designed for Marine use or the larger motorhome & caravan. It has all the functions of the compact with the facility to add, as and when required, an additional two sensor units (order separately) and a relay output for additional remote alarm units (e.g. strobe flashlight). Size H 90mm x W 115mm x D 30mm

KOMBIALARM MULTI SENSOR KMBALRM KMBALSTL STROBE FLASHLIGHT

ADDITIONAL SENSORS FOR KOMBIALARM MARINE

The use of additional sensors increases the early warning capability of the system. This is particularly suited to boats as Narrowboats can be 70 feet long with multiple rooms. Additional gas sensors can be mounted at low level to pick up gas leaks quicker and CO sensor high level for early indications of CO build up. Sensor sizes H/W/D 50x50x24 mm.

SENSOR (Gas and KO-Gas) FOR KOMBIALARM MARINE

This sensor detects LPG, Propane, Butane and Methane Gas and Anaesthetic KO-Gas. This sensor can be used as second or third sensor unit. 3 m connection cable included (extendable).

KMBALSG KOMBIALARM EXTRA SENSOR GAS AND KO GAS

SENSOR CO (Carbon monoxide and smoke) FOR KOMBIALARM MARINE

This sensor detects carbon monoxide (CO) the dangerous fumes produced by faulty or poorly serviced gas appliances. This sensor can be used as second or third sensor unit. 3 m connection cable included (extendable).

KMBALSCO KOMBIALARM EXTRA SENSOR CO

GAS WARNING SYSTEM CAMP SIGNAL

The series camp signal model is a self-sufficient warning system that incorporates the sensor and the acoustic signalling unit in addition to the semiconductor based electronics. It is designed to work with a 12 Volt DC supply. Size 55 mm ø, Height 30 mm. Area of use: Caravans, Motorhomes, Boats, Holiday homes

CAMP SIGNAL FOR MONITORING GAS **CMPSIGP** CAMP SIGNAL FOR MONITORING CO **CMPSIGC**

CBE COMPACT GAS LEAK,

ANAESTHETIC GAS & CARBON MONOXIDE DETECTORS

Latest electronic technology providing the utmost reliability and accuracy in a compact housing. The detectors provide peace of mind protection for the occupants.

The combined LPG and anaesthetic gas detector (MTG/G) has been specially developed to combat the threat of nighttime robbery, which is spreading in Europe. While parked at night anaesthetic gas is sprayed into vehicle vents allowing access for theft without you knowing until you awake. This is particularly prevalent in southern Europe and France. The carbon monoxide detector (MTCO/G) will warn of faulty flued or poor burning quality gas appliances, particularly useful if heaters are left on at night.

WAECO MagicSafe DMSG 150 Gas detector 12 and 24 volts

How do you know if gas from an on-board supply has leaked into your vehicle? Probably only when it is too late ... The WAECO MagicSafe MSG 150 gas detector protects you. It reliably detects the presence of narcotic gases in the atmosphere and immediately triggers the alarm: the integrated buzzer emits an audible signal and the red LED flashes. Simultaneously, the output relay is switched on. It can be used to activate external alarm units up to 10 A. You can silence the audible alarm by pressing a button. The same button can be used to start the sensor's function test. Detects all common narcotic gases based on ether, chloroform, butane, ethane and trichlorethene. It

automatically adjusts to the room atmosphere. Can be fitted as a standalone device or in combination with the MagicSafe MS 650, MS 660 and MS 670 alarm systems. Audible and visual alarm

signals, Self-cleaning gas sensor

CBE SWITCH MODE BATTERY CHARGERS

are specifically designed for the motorhome, caravan and boating sectors. The battery charger can remain connected or be continuously on, as it automatically chooses the charging needs of the battery.

The high frequency switching technology provides higher performance levels as well as

The switching battery charger can automatically charge 12v batteries (lead-acid, AGM or gel). The battery charger is protected against overheating and the 12 V outputs are protected against possible short circuits and polarity reversal.

The charging process "IUoU" takes place in four stages:

1) Battery charging with maximum current until the end-charge voltage is reached. NOTE: the end-charge voltage can only be reached if the battery is fully efficient.

2) When the end-charge threshold is reached the battery charger continues to operate

for 90 minutes (lead-acid batteries) or 8 hours (lead-gel batteries) with constant voltage.

3) Constant voltage holding at 13.8 V (gel batteries.) or 13.5 V (lead acid batteries.).

4) After 10 hours, the battery charger switches to the Stand-by mode and begins to charge again only when the battery voltage is lower than 13 V

CBE COMBINED FRESH AND WASTE WATER TANK GAUGE

MT214/G twin water gauge provides fresh & waste levels with LED display. A single red LED warns of the waste tank filling up and four different coloured LED's identify 4 levels in the fresh tank. The gauge comes complete with 4 metres of cable, a pair of stud sensors for the waste tank and a SP5/40 fresh water tank sensor this sensor can be shortened to suit tank depth. Fresh sensor is OK for use in metal tanks. Waste studs not to be fitted in metal tanks (12 volt DC only). Panel colour grey matches up to CBE modular plates system (Page 88-89)

CBE combined led fresh and waste tank gauge

CBE INDIVIDUAL FRESH WATER TANK GAUGE

MTT/G water gauge provides fresh levels with LED display. Four different coloured LED's identify 4 levels in the fresh tank. The gauge comes complete with 4 metres of cable and a SP5/40 water tank sensor this sensor can be shortened to suit tank depth. OK for fitting in metal tanks (12 volt DC only). Panel colour grey matches up to CBE modular plates system (Page 88 – 89)

Solver is an electronic device that eliminates the sulphation of lead batteries. Providing longer life, enhanced performance & more power from your batteries. See our website for more information on this excellent energy saving device

BSQ121 SOLVER **BATTERY MAINTENANCE** SYSTEM 12V 120Ah

Sealed AGM: (Absorbed Glass Mat) originally developed for military aircraft where power,

weight, safety and reliability were paramount considerations. Faster Recharge, Sealed, Totally

Maintenance Free, Much better charge retention deep cycle battery. Higher resistance to

vibration Higher bulk charge acceptance rate (which means up to a 15% shorter recharge time

Using a VRLA sealed AGM battery is recommended inside a semi-enclosed area, like the

passenger compartment, as it is safer than a wet battery being spill, leak proof, non gassing &

can be mounted in virtually any position even on its side! (because it is totally sealed and

maintenance free). In most cases AGM batteries will give longer service life & greater cycle life

than a wet cell battery. They have particularly low self discharge rate (typically 1%-2% per

month) so that they will not go flat during long periods without charge. Our Premium BANNER

AGM range of batteries are perfect for Caravans, Motorhomes, Horseboxes, Boats & Specialist

(20Hr rate) (100Hr rate)

SOME GUIDANCE ON DESIGNING YOUR MAINS & 12 VOLT ELECTRICAL SYSTEM

The electrical system is a very important part of your conversion. It is important to ensure it is installed in a correct manner by a competent person and inspected for safety regularly.

MAINS ELECTRICITY

To use mains 220-240volt electric's "site hook-up" in your vehicle you will need to obtain and install the following items. To connect between the site electric's post and your vehicle you will need a 10 Metre mains input lead with blue CE connectors (ML10). If you are in Europe some sites will have a different plug so you will need the Continental adaptor (MCLE). To plug in your vehicle at home either to top up the battery or chill down the fridge you will need a UK adapter (MCLUK) to plug into a domestic 3-pin socket. To connect the mains input lead into your vehicle you need a flush fit external mains inlet socket with lid (MIFFB colour black, MIFFW colour white) this is fitted through the sidewall of your vehicle in a suitable place. You connect this with 3 core cable to the Mains Consumer Unit (DS120-S or MCU2516) which provides the safety of the RCD (Residual Current Device), ELCB (Earth Leakage Circuit Breaker) main switch and double pole MCB (Miniature Circuit Breakers) to protect the mains electrical circuits in your vehicle, i.e. fridge, charger, 13amp sockets etc. The Consumer Unit, which is normally fitted in the base of the wardrobe or bedbox, must be earthed to the chassis to provide the correct protection. The connection to the Battery charger is the link between the mains and the 12-volt system.

12 VOLT ELECTRIC'S

Your 12 volt system is the heart of the vehicles conversion. You will have the vehicles existing battery "AUTO or B1" used to start the engine. It is best not to connect any items for the conversion to this battery. If you drain down this battery you will be unable to start your engine and therefore charge up your battery. You need to start by installing a second battery "leisure or B2" this can be one battery 75-110 A/hr or for bigger electrical needs a pair of 110 A/hr batteries in parallel, connect positive to positive and negative to negative. By joining them this way you double up the batteries capacity 2 x 110 but retain the voltage at 12 volt (If you join them in series positive to negative you will get 24 Volts!). You will "split charge" your leisure battery by connecting a relay (R228) between B1 and B2 & the relay signal wire to the D+ terminal on your alternator. When the engine is started & the alternator is charging, the leisure (B2) battery will be charged up via the relay. The main 12 volt system needs to be monitored and controlled from a control panel and distribution system (PC100 or PC200). The system has control switches and built in circuit protection fuses to protect key equipment. All items and their cable runs MUST BE FUSED to the correct rating. Additional fused circuits can be provided using the blade fuse holders (BFH4, 6, 8 & R420/421). This system also has a charger to charge the leisure battery from the mains 240v connection. (See above) To ensure the auto battery remains topped up when stationary for long periods or using cab fitted equipment i.e. radio, DVD, NAV Monitor, use a CAK Battery Charge Manager (BCM12) which trickle charges excess charge from the leisure battery back to the auto battery when the leisure battery is being charged.

TOP ENERGY BUILT IN OPERATING LOCKER FOR HONDA EU10i & EU20i GENERATORS

- Secure storage
- No need to remove generator to operate
- Ultra quiet operation
- Ease of access
- 50% the cost of a built in generator & less than 50% of the weight also
- Easy for you to remove if it is needed away from the installation.
- Can be used for other storage when generator not on board.
- Unique patented design

Top Energy is designed exclusively for the reliable Honda EU10i & EU20i generator range. Casing is produced from powder coated galvanized steel for good corrosion resistance has openings located for cooling and access to controls for operating the generator. The **Top Energy** casing bolts to the floor with anti vibration mounting brackets (1), this can be mounted to the chassis with optional brackets though. The casing interior is lined with noise absorbing foam to make these quiet generators even quieter. The generator is located in a base tray that slides out on ball bearing draw slides attached to this tray is the casing door. The casing door is retained by two screw locks with removable key for security. The front of the casing has a hinged multi adjustable mounting frame to attach the section of side skirt cut out to fit the Top Energy.

The supplied rubber profile is bonded to the edge of this section of side skirt to give a neat finish when the skirt door is closed. This is finished off by the installation of two suitable locks (LDL1036) (An aluminium reinforcing profile to aid fitting the locks can also be supplied if required) to secure this outer door making the generator even more secure. The exhaust fumes are ducted away with the supplied metal piping (2) further reducing noise while allowing the generator to be operated while traveling. We recommend the addition of the Vent Wind Deflector (3) produced in tough plastic it allows the airflow to draw through the casing allowing the **Top Energy** generator to be operated while on the move.

GENTEFS OPTIONAL FUEL STORE FOR TOP ENERGY

GENVWD VENT WIND DEFLECTOR FOR TOP ENERGY **HONDA PORTABLE GENERATORS**

Honda Inverter Technology ideally suited for use with sensitive electronics due to a clean sine wave of energy that prevents surging. Honda Oil Alert system will shut the unit off when the oil drops below a safe operating level. • DC terminal for charging 12-volt automotive type batteries (requires additional lead). • The Honda EU range is the best choice for stable power whether for the caravan, motorhome, boat or standby power during power cuts. Honda 5 year Warranty. Produce only 59dB of sound at 7 meters with a full load, which is less than the rating of common speech. The Honda EU10i small super quiet Honda generator is extremely portable (at only 29 lbs / 13Kgs.) as well as fuel efficient. Will run for up to 8.3 hours on a single tank of fuel, when used with the Honda Eco Throttle feature. At only 46.3 lbs (21 kg), the Honda **EU20i** generator utilizes Honda's "state of the art" inverter technology to provide 2000 watts of lightweight, quiet and efficient power. It will run up to 10 hours on a single tank of fuel when used with Honda's Eco Throttle feature.

DOMETIC INTEGRATED GENERATORS

We offer the full range of generators and accessories please ask for any Dometic item not in our catalogue.

Dometic TEC 29

The top seller in the range! Super-compact dimensions, light weight of just 44 kg and, with its 2600-watt capacity, just as powerful as conventional predecessor models. Petrol-fuelled engine, modest energy consumption, very quiet running. Suitable as a power source for all Dometic air conditioners.

Dometic TEC 29LPG

The tried and tested TEC 29 is now also available as a gas model. The same benefits, same performance. minimal noise and odour emissions, extremely high efficiency.

Dometic TEC 40D

This low-noise diesel generator is new in the camping / caravan range and has already proved itself to be highly reliable in tough everyday use. It can get something going with 3500 watt continuous output using very little fuel. That is also enough to run two Dometic motorhome air conditioners at the same time.

Dometic TEC 30EV

Environment-friendly with diesel fuel, and the most economical generator in the range with a fuel consumption of 0.7 litres per hour. Purposedesigned for use in larger motorhomes and utility vehicles. Low-noise operation thanks to excellent sound insulation. Suitable as a power source for all Dometic air conditioners.

Dometic T4000H

Dometic T 2500H

Dometic T2500H

A genuine mobile power station! Generous 3500watt continuous output - plenty of power for two Dometic motorhome air conditioners. Tried and tested unit with high-performance petrol engine [9.0

Favourably priced, reliable appliance. Compact

design, light weight. Low-noise, high-performance

petrol engine [5.5 HP], economical consumption.

2000 watts continuous output - enough to supply several electrical appliances at the same time, or

Dometic air conditioners of matching power rating.

DOMETIC - WAECO PRODUCTS

The new WAECO PerfectView monitors

The two flat-screen 5" and 7" monitors differ only in their size, and are otherwise equipped with the same performance features. LCD technology and LED backlighting ensure a premium picture display. Large, easily to reach pushbuttons make operation very convenient. Particularly practical: when required, the monitors can be removed without the cabling to protect them from theft. Other key features; LED background illumination, Optimum picture quality even at low temperatures, Two camera inputs with signal detection, Real-view or mirrored picture function via monitor, Picture settings can be saved for each camera input, USB-battery output, For 12-volt to 30-volt operating voltage.

The new WAECO PerfectView cameras We know from experience how different the expectations made of a reversing video system are in the recreational sector. That's why we have completely overhauled the PerfectView camera range and adapted them perfectly to both monitors. Two brand new cameras (CAM 50C & CAM 80C) & the tried-and tested twin camera CAM 33C1 ensure that no user wish goes unfulfilled. Other key features; cameras feature infrared Led's for night view, temperature controlled heater, IP68 rated camera housing, CAM80C offers 1450 extra wide picture.

REVERSING CAMERA KIT CONTENTS: 5" or 7" LCD colour monitor, colour CCD camera, 20 m monitor-to-camera connection cable, set of cables for monitor, installation fittings for all components, instructions,

OPTION: All systems have option to fit a second camera and MagicWatch DMWE850RV Integrated Parking Distance Aid.

Entry-level reverse vision

Elegant colour camera in silver or white. Also featuring the 5" or the large 7" monitor. Two impressive basic solutions at an attractive price. CAM50C Camera available in white or silver.

WAECO SinePower

SinePower inverter series with continuous power ratings of 700 - 2500 watts clearly come up to professional standards. Delivering pure sine wave voltage, they are the best possible choice for highly sensitive and powerful electrical appliances. They meet industry standards and combine ultimate user comfort with invaluable technical features. The mains supply priority circuit with voltage synchronisation, for example, switches to the mains power as soon as it is available and ensures uninterrupted voltage supply to the connected appliances with a smooth switch-over. Or the automatic activation of the "sleep mode" when no 230 volt appliances are being operated - saving energy and reducing the strain on the on-board battery!

Optional remote wall control panel; DMCR9 Simple version with on off and LED indicator, or DMCR7 Low-voltage, over-voltage, Power on indicated by red LED overheat and overload indicated by red LED's, stand-by and power on indicated by green LED's. Both have 7.5mtr connection cable. Optional remote wall control panel; DMCR9 or DMCR7.

NEW WAECO CombiPower

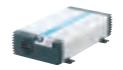

2000w 12v pure sine wave inverter with integrated automatic battery charger 12 or 24 volts / 2000 watts. UPS function (Uninterrupted power supply). Power support function boosts the external mains power supply with energy from the battery. Weight: 14 kg. W x H x D: 490 x 145 x 285 mm. Supplied with remote wall control.

- Adjustable gain amplifier, with 2 outlets for 2 TV sets, powered off 12, 24 and 230 volts.

TVSFTV

UHF TV SIGNAL FINDER - TVSFTV

Designed and Developed by a Caravanner for the Leisure Market. A pocket sized UHF TV signal finder designed to enable you to ensure that your directional aerial is pointing in the correct direction for optimal reception. Simply connect the aerial lead from your TV equipment to the TV Signal Finder then rotate the aerial until the greatest number of led's are lit, this indicates the strongest signal and therefore the best position for your aerial. The unit is supplied with full instructions, a PP3 battery and is guaranteed for 12 months. Designed and Manufactured in the UK.

COMBINED UHF TV & SATELLITE SIGNAL FINDER - TVSFTVSAT

NEW and UNIQUE product. UHF TV and Satellite signal finder in one neat & simple to use unit. Even greater sensitivity - 12 Led's plus an audible signal indicator-and is ideal for the more remote areas of the UK, including Scottish Highlands, Lowlands and Ireland. The most sensitive TV signal finder of our range and probably on the market, with the added bonus of a built in Satellite Finder. The unit is supplied with a battery, 30cm patch cable and full instructions. Extra bright led's are used for daylight operation plus an audible signal level indication. As used by professional aerial installers who pay £hundreds for the nearest equivalent test meter!! A "must have" if you watch TV in your caravan, motor-home or boat. Designed and manufactured in the UK.

Omni-directional HIGH SPEED TV Antennas

WING RANGE OF digital TV AERIALS (FREEVIEW COMPATIBLE))

They have been designed with an aerodynamic shape for the fastest campers. Each aerial has a special ergonomic foot to allow easy installation on even the most angular shaped roof of the latest streamlined campers and caravans. All Wing models have been designed to receive Terrestrial Digital TV signals using 30+ channel DVB-T FREEVIEW set top box from home for the future, while still being able to receive all the existing Analog TV channels. (To receive Freeview a decoder must be present).

New aerial with pivot mechanism for Horizontal and Vertical polarity adjustment from inside the vehicle. Thanks to this it is possible to receive all TV (Digital & Analog) signals which are transmitted on both horizontal and vertical polarity with top performance and higher sensitivity to weak signals. High gain 38 dB with amplifier. (Digital broadcasting caused the vertical polarity signals to increase in some countries such as Italy & UK). Great for boats.

TVPLUS2LP Teleplus2 165cm pole TV aerial TVPLUS2SP Teleplus2 39cm pole TV aerial

EXTERNAL TV AERIAL INPUT/OUTPUT

The external TV Aerial socket comes with 5 metres of 75 Ohm cable complete with pre fitted male plug. The exterior socket has a female connection. Socket is 50mm Wide x 32mm High and requires a 26mm hole. Easily fitted with 2 screws and Sikaflex 512 sealant. Colour: White.

TV9608AW External TV aerial socket.

TELECO SATELLITE SYSTEMS

MANUAL SATELLITE DISH SYSTEM EQUIPPED WITH DIGITAL SAT FINDER AND ELECTRONIC INCLINOMETER

The Voyager G3 Digimatic has been specially designed and built by Teleco to make manual searching of digital satellites easier for the user in just a few, quick and simple operations. Currently, the biggest difficulty in manually locating a satellite broadcasting digital TV signals is linked with the fact that digital signals are displayed on TV screens with a certain delay. Therefore the user is forced to carry out pointing in very slow movements to prevent the risks of going past the required satellite without finding it. To solve this problem - shared by thousands of camper users - Teleco has applied the most advanced technologies in developing its new Voyager G3 Digimatic with DSF80/E Digital Finder, an electronic elevation meter displaying the absolute dish angle even when the vehicle is not level. The Voyager is installed with a digital inclinometer in the hinge providing an output reading of the dish angle. The DSF80/E is a device specially designed and built for all those users who wish to be able to quickly locate their required DIGITAL satellite with a manual dish system, avoiding all the "delay" issues connected with digital broadcasting. It is also extremely helpful for all the owners of LCD television sets (instead of traditional cathode ray tube TVs) which, being also the product of digital technology, will display pictures on their screens after a certain "delay"

50cm Dish will be fine in the UK, for most of Western Europe a 65cm will generally suit. But for southern Europe (France, Spain, Portugal and Italy etc) an 85cm system will be required.

Voyager G3 Digimatic Each Kit contains: • Pre-assembled satellite antenna, complete with folding mast and connecting cables. • Dish with Universal LNB • Digital Finder DSF80/E • Installation and operation manual.

TVSVG350 Voyager G3 Digimatic 50 (49 x 45.5cm Dish) TVSVG365 Voyager G3 Digimatic 65 (72 x 67 cm Dish) TVSVG385 Voyager G3 Digimatic 85 (91 x 85 cm Dish)

Voyager G3 is available with 52cm (LM) or 33cm (SM) Mast please specify at time of ordering TVSVG365 Voyager G3 Manual 65 (72 x 67 cm Dish) Without digi satfinder

TELECO DSF80 DIGITAL SATELLITE FINDER - TVDSF80

The easiest way to manually search for a satellite anywhere. Simply choose 1 satellite from the 8 preprogrammed, the sat finder will then only give you signal strength indications for that satellite. This is Ideal due to the all or nothing nature of digital signals. The DSF80 makes finding satellites as easy as using the much more costly professional installer units. An excellent piece of kit will save you lots of effort each time you set up. This is a similar finder to the one incorporated in the Voyager Digimatic G3 kit.

VOYAGER MOTOSAT

SEMIAUTOMATIC MOTOR-DRIVEN SATELLITE

ANTENNA

Equipped with 2-figure display built into mast that provides information on dish angle for ease of set up. Voyager MotoSat is available with 52cm (LM) or 33cm (SM) Mast please specify at time of ordering Weight: 85 DISH 10.2KG 65 DISH 8.0KG

SATELLITE SYSTEMS

ROADPRO SAT DOMES

The ROADPRO Sat domes are the well respected sat domes formerly marketed under the Camos branding. As with all RoadPro dome systems, it's incredibly easy to operate; most users will only ever have to switch the control box on - that's it! When the sat-dome has found the satellite (usually within 30 seconds) the controller can be switched off so that they system uses virtually no power when in operation.

We recommend professional installation of any satellite TV system but with just one cable to connect to the controller and a simple 12V electrical connection, RoadPro sat-domes are easier to install than any other automatic satellite TV system.

TVSD3201 RoadPro 30cm High Sat Dome static.

With all the advantages of a dome satellite TV system, this model is designed for use when the vehicle is parked. It's a low-profile model, measuring just 30cm high and so ideal when height is a consideration.

This model will pick up BBC, ITV and all UK channels as far south as southern France. Further south - as far as southern Spain - a variety of channels will always be available including BBC News, Sky News and most BBC radio stations. Six satellites are programmed into the controller so that - with a suitable receiver - hundreds of TV & radio channels are available all over Europe.

TVSD3202 RoadPro 40cm High Sat Dome static.

With all the advantages of a dome satellite TV system, this model is designed for use when the vehicle is parked. Its larger dish gives maximum coverage across Europe. This model will pick up BBC, ITV and all UK channels as far south as Barcelona. Further south - as far as southern Spain and even Morocco - a variety of channels will always be available including BBC News, Sky News and most BBC radio stations. Six satellites are programmed into the controller so that - with a suitable receiver - hundreds of TV & radio channels are available all over Europe.

RoadPro sat-domes come with the following parts in the box:

- Sat-dome 1 HQ co-ax cable (1m) Control box incl. power supply
- 1 Cable-entry box 1 HQ co-ax cable (10m) with F-plugs Installation and usage instructions - 12 screws (3 in dome cover, 9 in bag)

Optional mounting feet for easy removal of any RoadPro Sat-Dome we have special mounting plates. These are mounted permanently to the vehicle's roof and the sat-dome's feet are screwed to them.

ROADPRO MECATRONIC SATELLITE SYSTEM - TVSDMEC80

Ease of use, reliable operation, rugged build quality using top quality components and a very competitive price are a great combination in this Mecatronic automatic folding dish system.

With its 80cm dish, it's an excellent choice for people travelling to Spain & Portugal, Italy or into eastern Europe.

Outside, the motor unit and dish are just 19cm high when the dish is parked and weigh only 15.5Kg. Inside, the control box can be hidden away and the display panel fits discreetly onto an interior panel.

There are only three buttons on the display panel: POWER ON/OFF, SATELLITE SELECTION and SATELLITE SEARCH. With a choice of all the popular satellites and an average search time of under one minute, satellite TV in your motorhome, caravan, truck or boat couldn't be easier!

TELECO DIGITAL SATELLITE RECEIVER - TVSTSDR5000CI

Satellite Digital Receiver to receive all Free to Air programs and Encrypted programs by inserting the special CAM module (not supplied) and Smart Card (not supplied). Built to feature latest-generation MONOCHIP microprocessors, it has been specially designed to make dish pointing Fast and Accurate. The special CAMPING MENU contains all the necessary dish pointing information, e.g. Satellite List, Signal lever meter, and Signal quality meter.

Warranty: When fitted by **SupremeTech.co.uk**, an approved RoadPro installer, all models have a five-year warranty which covers parts and labour against faults in manufacture or design. If the unit is not installed by an approved RoadPro installer, a three-year warranty applies. (This applies to units used for leisure purposes. If used for commercial applications, the warranty is for two years.)

Sat Dome search controller (Size 245mm W x 42mm H x 146mm) included with sat dome will search for Astra 2 (N & S) / Eurobird 1, Astra 1, Hotbird, Sirius, Atlantic Bird 3 Hispasat satellites. No remote control or receiver included. Can be used with any satellite receiver including Freesat, Free to Air & SKY receivers or Televisions with built in satellite receivers. Current consumption when in use and search completed: <0.1 Amp. Weight of dish & motor Approx 9.5Kgs. 76cm diameter installation area.
